

The Pink Lady of Greencastle

SPECIFICATIONS:

Date: mid-1990s

Location: O'Hair Mansion, Greencastle, Indiana

Photographer: Guy Winters

Type Camera: Unknown

Other Information:

Location has a history of paranormal activity. Abandoned property (since demolished)

These pictures have been floating around for a while and even appeared in a documentary entitled *World's Scariest Ghost Pictures*. They were allegedly taken at an abandoned mansion near Greencastle, Indiana, sometime in the late nineties by a pair of amateur ghost hunters named Guy Winters and Terry Lambert.

Told by a friend that there was an apparition in residence at the abandoned mansion, Winters and Lambert and several others received permission from the properties' owners to investigate the site, which they did over a several day period. Using both video cams and film cameras, they snapped numerous pictures of the mansion, several of which caught this apparition peering out a second floor window. The figure of the woman was not seen at

the time the photos were taken but appeared once they were developed. Analyzed by photo experts, the images of the woman (thought by some to be the spirit of a young woman who died in the home in the early twentieth century by the name of Irene O'Hair) have been declared as authentic since the images exist on the negatives, thereby reducing—though not necessarily eliminating—the possibility of fraud. Additionally, being that essentially the same figure appeared in no less than four consecutive photos makes hoaxing it four times more difficult. The only possibility is that the men were able to get a female accomplice to pose for them, though that wouldn't explain why she looks so "ghost-like" and, in a couple of photos, partially transparent.

If legitimate, these are some of the

clearest images of a "ghost" ever captured on film, which is, of course, what makes them so difficult to accept as real. If hoaxed, they are extremely well done.

Another photo of the Pink Lady taken through a screen door.
